

ABSTRACT OF THE DISCLOSURE

A moving side connector (30) has a housing (31) with a receptacle (32). Male terminal fittings (33) are mounted in the housing (31) and have tabs (33a) that project into the receptacle (32). A waiting side connector (20) has a mating housing (21) that can fit in the receptacle (32). Levers (38) are supported rotatably on the male housing (31). A cam pin (40) is provided at an end of each lever (38) and is supported slidably in a corresponding cam groove (47) of a frame (46). A moving plate (35) is mounted in the receptacle 32 for movement along a connection direction (CD). The moving plate (35) has positioning holes (42) for positioning the tabs (33a) and cam pins (44) that engage cam grooves (39) of the levers (38) together with cam pins (24) of the mating housing (21).
